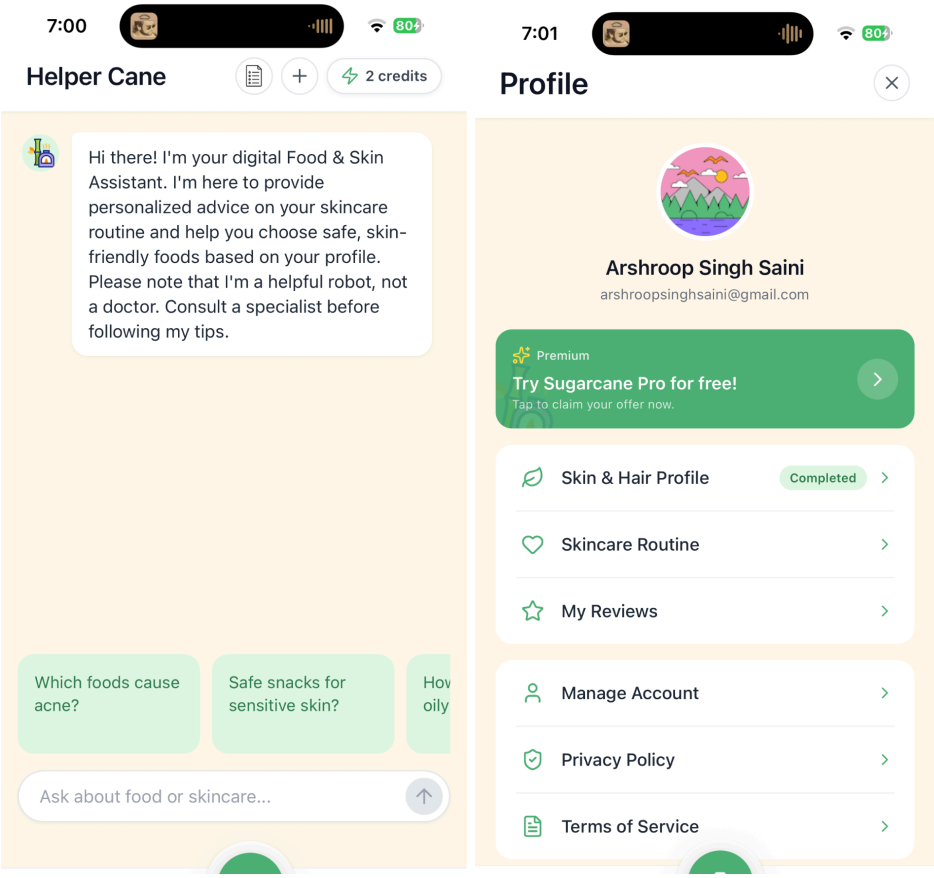
Assignment:

Build a simple **chatbot mobile app** using Gemini API. It should have 2 screens/tabs: a simple chat interface and a profile page.

Example mockups:



Stack to use:

- React native (expo) for the frontend
- Fast API (Python) for the backend
- Use Supabase for the database and authentication.

Targets:

- Create a custom paywall with yearly and weekly products.
- Integrate Revenuecat – create products and test payments in sandbox.
- Integrate it with an end to end authentication system (Supabase auth preferred)

- Integrate it with sentry for monitoring backend logs only (signup for a free sentry account).
- Use Ngrok for tunneling the backend server.

What would be evaluated:

- Clean and structured codebase.
- Finishing all the targets.
- Ability to extensively use AI tools for problem solving.

Time limit: 3 days.
Submit Github repo once done.
